

MUGAVERO

**BOS**

*For natural protection*

*Bos is a formulation of origin vegetable containing acids polyunsaturated fats that activate the defense mechanisms of the plant.*

Bos interferes with the interactions between plant and harmful organism and represents a valid solution to reduce the resistance phenomena of pathogens towards the synthetic molecules.

The vegetation treated with Bos appears healthier and the fruit acquires a greater brilliance of the epicarp.

Selective towards pollinating insects, it can be included in integrated defense programs, helping to reduce the active ingredients in compliance with an increasingly sustainable agriculture.

Bos has no phytocautic properties even at high doses and can be used during all months of the year as needed.

### **IN THE PLANT**

- Increases self-defense against cryptogams and insects
- Ensures healthier vegetation

### **IN FRUIT**

- It reduces the transpiration of the fruit
- It gives greater brilliance to the epicarp
- It does not stain

The vegetation treated with Bos appears healthier and the fruit acquires a greater brilliance of the epicarp.
