MATURAU

The right color for your crop

Maturau is an organic biostimulant indicated for the completion of the ripening and coloring processes of the fruit, to be applied by foliar application.

The complexing formulation of potassium favors its rapid absorption and contributes, at the leaf level, to regulating the opening and closing mechanism of the stomata.

In addition to improving the uniformity of color and the sugar / acid ratio, Maturau gives the fruit greater flavor and shelf life.

The particular formulation, characterized by high adhesiveness, makes the product readily assimilable and totally metabolized without leaving residues.

IN FRUIT

- Accelerates and evens out maturation
- Complete and uniform the coloring of the epicarp
- It gives more flavor
- It gives greater shelf life
- Increases the sugar / acid ratio

Foliar

Zero residue

DOSES AND METHOD OF USE

Maturau should be applied in post-veraison when the fruit has reached 60% of the color change of the epicarp and on a properly hydrated plant that does not show symptoms of water stress.

Repeat the treatment between one collection and the next as needed.
