TONICAL

Best Quality On The Pitch

Tonical is a calcium-based biostimulant nutrient activated with amino acids and peptides from Ecklonia maxima brown seaweed extracts.

IN THE PLANT

- Prevents the appearance of calcium deficiency symptoms

IN FRUIT

- Improve texture
- Strengthens the cell walls
- Increases the shelf-life

The particular organic formulation carries calcium inside the cell membrane, increasing the speed and effectiveness of assimilation.

Calcium plays a fundamental role in the thickening and strength of cell walls and in improving the texture of the fruit.

Application with **Tonical**, from fruit set to just before harvest, improves the consistency, organoleptic characteristics and shelf-life of the final product; Tonical prevents calcium deficiency problems such as apical rot, fruit splitting and marginal leaf necrosis.

Tonical can be administered by foliar application or by fertigation, the results of the application are readily appreciated.
