FOSFIPO TASS

Fosfipotass is a liquid fertiliser containing high levels of pure phosphorus and potassium.

A good availability of phosphorus and potassium in plants ensures a prompter response of natural defence mechanisms against biotic and abiotic agents; **Fosfipotass** promotes the development of root biomass and stimulates the self-defence of plants by increasing the synthesis of phytoalexins.

PLANT

- Increases self-defence
- Disinfects the root system
- Strengthens tissues

The formulation is characterised by its high mobility within plants, being easily absorbed within plant tissues, suitable thus for foliar application or fertigation.
