NIGER L

Leonardite - Canadian (Alberta)

Niger L is a physio activator, with a high concentration of fulvic acids extracted from Leonardite, characterised by an acidic pH that improves its absorption through the plant tissues.

Its formula is particularly soluble and contains a great quantity of humified organic carbon, readily available.

Niger L application directly to the leaf is recommended throughout the plant cycle, to promote cell multiplication and biomass development. Applied during the post-fruit set, it stimulates fruit growing and increases dry matter.

Plant

- Highly absorbable

Fruit

- Promotes fruit growing
- Increases dry matter

Its high level of fulvic acids and absorption properties make for an efficient product, even if applied at low rates. Niger L is approved for organic farming.

NIGER L

Niger L benefits are useful for both the soil and the plant
