

MUGAVERO

STATIA

*Examine the plant's vigor
in a natural setting.*

Statia is a resistance inducer with a completely soluble and innovative formulation, readily absorbable within plant tissues. It is the perfect product to promote the thickening of the leaf blade and the lignification of tissues.

Depending on the applied dose, Statia controls the plant vigour by shifting the sink-source balance towards flowering and production.

If applied close to the veraison, it promotes sugar synthesis and degradation of acids.

PLANT

- Limits the excessive vigour of the plant
- Strengthens the leaf surface
- Improves lignification
- Promotes tissues cicatrisation

FRUIT

- Helps to enhance coloration

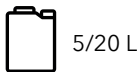

Statia can be applied regularly throughout the life cycle of the plant, helping to maintain its healthy conditions and to limit the number of active ingredients used in defence strategies.

Statia

*Table vineyard under a greenhouse.
Bunch and wood ripening*

Statia can be applied regularly throughout the vegetative-productive cycle of the crop, helping to keep the plant healthy and to contain the number of active ingredients used in defense strategies.
