

MUGAVERO

# GEL MUGASOL Line

*A specific gel formulation*

***Mugasol Gels contain the three main elements for plant nutrition and are rich in microelements, effective and environmentally friendly.***

The different Mugasol Gel formulations are characterized by the presence of an organic matrix consisting of dispersing and humectant agents that allow to uniform the size of the drop and increase adhesion and durability on the leaf blade.

The gel matrix retains the nutrients and water sprayed on the leaf surface, releasing them gradually and progressively so as to increase cation exchange capacity, water retention and improve nutrient absorption.

The extraordinary solubility (1:1) and the high concentration of nutrients allow, when needed, a substantial reduction in the volumes of water used during the treatments.

### **PLANT**

- Increases productive potential
- Prevents and treats physiopathies from nutritional imbalances
- They mitigate environmental stresses

### **FRUIT**

- They improve the quality

Original formulation and easy to dose.

The gel formulation allows to obtain a high ratio of nutrients per liter of product and it is completely soluble in water.

All formats are free from chlorides.

### **VEGETO**

*It has a high nitrogen content and stimulates vegetation growth*

### **RADICO**

*Thanks to the high content of phosphorus, it stimulates the emission and development of roots*

### **MATUR**

*It has a high potassium content and improves fruit ripening*

### **PLANTA**

*It promotes a regular growth and is suitable for all phases of the crop cycle*

## DOSES AND METHOD OF USE

CROPS	FOLIAR ml/hl	FERTIGATION L/HA
<i>Cereal</i>	200 - 400	5-10
<i>Floriculture and Ornamental</i>	200 - 400	5-10
<i>Forage</i>	200 - 400	5-10
<i>Fruit</i>	200 - 400	5-10
<i>Industrial</i>	200 - 400	5-10
<i>Horticultural</i>	200 - 400	5-10
