NICAL L

Nical L is an acid solution containing calcium and nitrogen, to be applied by fertigation, that ensures the right amount uptake of these elements by plants.

The product, easily assimilated in the roots, improves the fruit characteristics in terms of dimension and consistency: it thickens the epicarp and provides resistance to cracking, increasing its shelf-life.

Nical L application is recommended for all types of cultivation and, in particular, from fruit set to just before harvesting.

WATER

- Lowers pH value

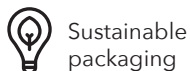

PLANT

- Satisfies calcium needs
- Strengthens cell walls

FRUIT

- Enhances consistency

The liquid formulation allows a prompt use of **Nical L**, without having to respect the usual dissolving times of a similar water-soluble granular product

DOSAGE AND METHOD OF USE

CULTIVATION	FERTIGATION l/m ³
Cereal	20-30
Flowering and Ornamental	30-40
Forage	5-10
Orchards	30-40
Industrial crops	20-30
Horticultural	20-30
