

MUGAVERO

**B&VI**<sup>®</sup>

**B&VI is an organic formulation liquid growth promoter with bioactive molecules produced by bacteria and natural plant extracts**

By stimulating multiplication and cellular distension and increasing photosynthetic and metabolic efficiency affects the natural selection of attached fruits by minimizing deformity.

On fruit crops, the most obvious result is the elongation and hardening of the stalk that results in a more efficient translocation of elements nutrients into the developing fruit crop.

On vegetable crops, it is an excellent accelerator of physiological processes, it can be employed throughout the crop cycle even to overcome stress phenomena of the plant.

#### ***PLANT***

- More uniform production
- Improving production

#### ***FRUIT***

- Increased shelf life
- Regular gauge
- Hardening of the pedicle

## On horticultural crops

- increase in piece size
- increase of S.S

## On fruit crops

- uniformity of piece size
- Lengthening and hardening of the peduncle

B&Vi is a product authorized in organic farming.

1 L

5/20 L

Packaging  
eco-friendly

Foliar

Approved for  
organic farm

## DOSES AND METHODS OF USE

CROPS	FOLIAR ml/hl
Flowering and Ornamental	100-200
Orchards	100-200
Horticultural plants	100-200
