

MOTO MOTO®

COMPOUND MINERAL FERTILIZER NP FERTILIZER SOLUTION

- It guarantees greater shine of plant tissues
Improves adhesiveness on the leaf surface
- Optimizes the effectiveness of treatments
- It lowers the pH reaction of the solution to be
- sprayed by neutralizing the bicarbonates

MOTO MOTO IS AN ACIDIFYING CORRECTOR FOR FOLIAR APPLICATIONS

Moto Moto is a formulation designed to correct the pH reaction of the solution and maximize the effectiveness of the foliar treatment. The product disperses quickly in water forming a solution that can be applied to all crops with conventional or low volume spraying.

The treated plant acquires better tissue shine, expressing an optimization of the vegetative balance and an improvement in crop performance.

Used at the minimum dose, **Moto Moto** has a penetrating effect on plant tissues while reducing, at the same time, the surface tension of the solutions on the foliage.

In the presence of "harder" water, use **Moto Moto** at the highest dose.

On particularly "delicate" crops it is suggested to carry out small preliminary tests before large-scale use.

Miscible with all commonly used pesticides and biostimulants.
