

# VIKING<sup>®</sup> LINE

Low chlorine content with potassium  
from sulphate only

**Viking** are specific complex granular fertilisers for basal and cover fertilisation for all crops.

- Suitable for all types of crops
- Balanced supply of main nutrients
- Improves the magnesium and sulphur uptake

The **Viking** products are characterised by the regular size of their granules, high solubility and sub-acid reaction, due to the presence of sulphur coming from the sulfuric anhydride, which is soluble in water, increasing the availability of the nutritional elements present in the soil, preventing deficiencies and physiopathies and improving the quality of the production.

Some products in the **Viking line** have a good supply of sulphur and magnesium.
